

GLOBAL SOURCING

THE WORLD IS SMALLER THAN YOU THINK

What was once daunting and expensive is now exciting and affordable. Global sourcing is within reach. G&T will create a solution to lower your production costs on existing products, get your new ideas to market faster and turn your goals into realities.

AVOID THE RISKS

It's on us to get it right. The hurdles that can scare companies away from trying to do it alone—spikes in demand, customs documentation, quality control—are where we thrive. Decades of experience with small, medium and large volumes, proficiency with highly complex specifications and a tremendous worldwide network of trusted relationships take your risks of global sourcing away.

Let Us Show You the World

World Resource Partners™, our trading entity, is an ISO 9001 registered company, and our process-based approach comes from Tier 1 automotive methodology. Simply put: we know what we're doing. With a massive fulfillment center in the United States, we also operate an engineering and quality office in Ningbo, China, where we specialize in global sourcing.

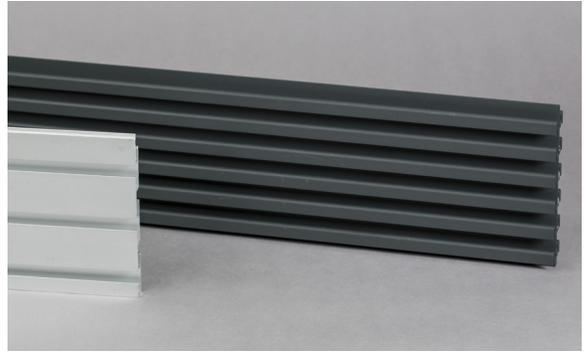

Your Full-Service Solution

Our detailed process ensures speed, reliability and accuracy. Wherever you are in the chain, we step in with a solution to get you where you need to be quicker and more inexpensively. Full turnkey services include development, sourcing, contract assembly, packaging and order fulfillment, giving you the peace of mind you need when taking on the world.

Design

Whether you come to us with a 3D model or napkin doodle, our team of engineers and quality specialists will work with you to develop your solution, qualify a supplier, and complete a detailed PPAP process. It's easy, painless and efficient.

Make

Our demand planners work with your forecast to ensure you have the right amount of stock when you need it. No need to worry about quality—that's on us to get right.

Distribute

You focus on sales and marketing to grow your top line. We manage the last mile of logistics and fulfillment, whether you need materials shipped to your assembly facility or complete products shipped directly to your customers, to help your bottom line.
